

80% of cardiac arrests occur in a place of residence. Cost has presented the barrier for resuscitation at home ... until now.

Life at Home

Using simple defibrillator equipment, cost effective to run, and supported by training videos and Chest Compression tools, resuscitation is now a realistic and cost-effective option for any family.

The life saving combination of a small yet powerful home use defibrillator, the LifePad chest compression training device, free video training and a pulse Oxymeter gives every home the reassurance that anyone at home suffering a cardiac arrest will have the right equipment on hand to attempt a rescue. Included in this offer, is a 5 year support package to replace pads and batteries (for the defib) should they get used. Weekly checks and easily undertaken and reporting these onto the BHF Circuit system is also required, so your local ambulance service knows of this device and its availability. Included also is a window sticker to tell your neighbors that you have life saving equipment.

Available from the Live is Life Foundation charity, Swadlincote, Derbyshire

Strategic Thinking in Resuscitation
